DEUTZ expands its engine portfolio in the US

- DEUTZ adds two new engines to its <19 kW power category
- D1.2 and D1.7 engines are ideal for a variety of application types
- Both engines meet the latest emission regulations in the US and the EU

DEUTZ Corporation signed a long-term agreement with Kukje Machinery, to expand its line of <19 kW engines in the American market. Two new engines, the D1.2 and the D1.7, will be available for immediate delivery throughout the Americas with complete DEUTZ parts and service support already in place.

“The D1.2 and D1.7 are cost-effective and powerful engines that meet the latest emission regulations both in North America and in the EU. By enhancing this particular engine range, we’re bringing DEUTZ quality and performance to even more equipment manufacturers”, said Dr. Frank Hiller, Chairman of the Board of Management at DEUTZ.

Both new engines will be DEUTZ-branded and supported by the DEUTZ service network. The engines are naturally aspirated, three-cylinder configurations offered in 1.2L and 1.7L displacements with output ratings of up to 19 kW. The D1.2 and D1.7 can also be utilized with the new E-DEUTZ products by providing customers with complete hybrid packages that are efficient and environmentally friendly.

“It’s all a part of our strategy to provide customers with engines that provide the right amount of power, but are still simple and economical to install and maintain,” said Michael Wellenzohn, member of the DEUTZ board of management, responsible for Sales, Marketing and Service.

The two models will explicitly meet the needs of customers who want to power machines like aerial platforms, trenching equipment and mini skid-steer loaders, as well as equipment for lawn care and pump applications.
