

PRESS RELEASE

Cologne, 25 January 2019

DEUTZ showcasing two new engines (D1.2 / D1.7) at the 2019 World of Concrete

- DEUTZ at World of Concrete in Las Vegas
- New diesel engines complement offering in the sub-19 kW power range
- DEUTZ Corporation and Kukje Machinery Co. sign memorandum of understanding

DEUTZ Corporation, the US subsidiary of DEUTZ based in Norcross, Georgia, is showcasing its growing range of engines at the World of Concrete trade fair in Las Vegas from 22 to 25 January 2019. This year's highlight are two new diesel engines (D1.2 / D1.7) in the sub-19 kW power range. DEUTZ Corporation is procuring them from Kukje Machinery Co. and will market them under its own brand name from the second quarter of 2019 onwards. The companies have signed a memorandum of understanding to this effect and are envisaging a long-term partnership. This agreement takes DEUTZ a further step closer towards creating a modular product kit and expands its offering in the sub-19 kW power range. The engines also open up opportunities for new applications and – together with electric and hybrid concepts – represent a further response to the current market trend towards downsizing.

The two compact three-cylinder engines with a capacity of 1.2 and 1.7 litres will initially be available in the Americas. They are designed to meet the demands of a growing number of customers who want to efficiently power machines like small aerial platforms, trenching equipment and mini skid-steer loaders, pump applications and lawn and garden equipment. Both will be DEUTZ-branded and fully supported by the DEUTZ service network.

“We foresee a greater demand for smaller and more efficient engines in this power range,” says Robert Mann, President and CEO of DEUTZ Corporation. “The D1.2 and D1.7 are simple and affordable engines that meet the latest emissions standards, both in North America and in the EU.”

The small diesel engines deliver exceptionally high torque that is usually only available in models with a higher power output. They represent an additional option from DEUTZ, alongside its full-hybrid engines, in response to the downsizing trend. DEUTZ will also be exhibiting proven performers such as the TCD 2.9, TD 3.6 Power Pack, TCD 16.0 and D2011 Xchange diesel engines on **stand N1837** at the World of Concrete.

Additional information about DEUTZ Corporation and its complete line of drive systems for the American market is available at www.deutzamericas.com.
